BETA

EasyGoal — quick start

Thanks for helping us make EasyGoal better! This is a beta: some things may not be perfect yet — just let us know.

1 Sign in

Open **app.easygoal.pro** in Safari or Chrome on a computer (Mac, Windows) or iPad. Enter your email — we'll send you a code, then enter it. You sign in once per device. You can also **"Continue without signing in"**, but then your sessions stay on that device only. We recommend signing in so your sessions don't get lost.

On a phone EasyGoal opens, but the screen is too small for it: use your phone to view a drill or make a PDF, and draw on a computer or iPad.

2 Draw a drill

The tools are on the left of the pitch: players, equipment, lines, zones and labels. Pick a tool and tap the pitch; drag an object to move it. The right panel has everything about the selected object. At the top — the view: **Top**, **Side**, **Behind goal**, **45°**. **Pitch** → **Half**: **Near**, **Far**, **Left**, **Right**. Drag an area template (choose the **Strip direction** first) as a whole, resize it by the corners, enter **Size, m** or tap **Rotate 90°**.

3 Frames and animation

In the **Frames** strip at the bottom, press **+** to copy the frame, then move the players. **Play** at the top animates the movement between frames. The **Full-screen show** button next to it shows the drill full screen: ← → arrows switch drills, Space plays the movement, Esc exits. Handy for going through it with the team.

4 Home screen and library

When the app opens — the home screen: **Library**, **Last session**, **New session**, **Match reports**, stats and a calendar. **Library** — cards of sessions and drills: search, filters (period, game moment, type, format), the **Animations** tab with moving drills, **Full screen**. On the coach card — **Players**: photo, date of birth, number, position, preferred foot, availability. You see availability and notes; in a club — the owner, co-owners and coaches, not viewers. In a club, pick **"My sessions"** or the club.

5 Calendar

On the home screen, tap a day: a single session opens straight away, several show a list. An empty day or **+** in the corner: **"+ New session on …"**, **"+ Match"**, **"+ Meeting"** or **"+ From library"**. The date is on the left, in the **Date** field. A meeting can have a **Presentation**: drills, a formation from a report, text and videos; **Show presentation** plays it full screen.

6 Drill and session description

On the right — **Exercise structure** (key moment, purpose, phase… coaching staff), **Game moment**, **Drill type** and **Format**: pick 4×4…11×11 and teams A and B appear on the pitch (**With goalkeepers** / **Without goalkeepers**). Participants — **Pick from database**; **Select all** skips injured and sick players. On the left — **Session description**: theme, purpose, players, venue and more, plus **Training structure**; move an old structure text from a drill with **Move to session description**. Session description — on the first page of the session PDF.

7 Copying and “Build session”

Reuse a session from previous weeks: in the **Library**, on a card tap ··· → **“Copy to date…”**, or use **“+ From library”** in the calendar. To add one drill to the open session — ··· → **“Add to “…””**. To put together a new session from different drills: **Drills** → **Select**, tick the ones you need, drag them into order and tap **Build session**. The originals stay unchanged.

8 Match report and squad

A session with the **Match** period (or one created with **“+ Match”**) has a **Match report** button; in the calendar it is **Report**. Two sheets: **Line-ups** — opponent, their system and formation, 1st and 2nd half, our formation (from the match drill, **Take from drill**); **Analysis** — attacking, switching to defending, defending, switching to attacking, set pieces, result. Drag the circles, tap one to change its number. **Report PDF** — A5, two sheets. All reports — **Match reports** on the home screen. The **Squad** button: choose the **Formation** (4-4-2, 4-3-3… or **Custom…** — shared with the report) and players from your list; the rest go to **Substitutes**. Injured and sick players are marked; adding them to the starting XI asks you to confirm. **Export squad** → **Squad PDF** or **Squad image** to send to your players.

9 Share

Export → **“Session PDF”** (first page — description and plan, then one drill per page) or **“PDF of this drill”**, or **“Image of current frame”**. For a match report — the **Report PDF** button.

10 Club

Account menu (top right) → **Clubs** → **“Join with a code”**. The club owner gives you the code. You join as a viewer; the owner can make you a coach. Every member sees the club’s sessions.

11 Nothing gets lost

No need to save — every change is saved automatically. If you are signed in, your sessions sync across your devices. Deleted items stay in the **Trash** for 30 days. We make an encrypted backup every night. You can keep your own copy: **Export** → **“Export library to file”**. Before removing the EasyGoal icon from your Home Screen, tap **“Save”** and wait for **“Everything is saved to the cloud”**.

Handy

Undo
`⌘Z` Mac · `Ctrl+Z` Windows

Select the object underneath
`Option + click` Mac · `Alt + click` Windows

The stack button next to “100%” — **Layers** panel (hide, lock, order; works on iPad too)

Support

Tap the **Beta** badge next to the logo or message **@easygoal_support_bot** on Telegram. Best of all: a screenshot plus your device and browser (e.g. “iPad, Safari”).
